The Cancer Program Practice Profile Reports (CP3R) allow St. Tammany Cancer Center to assess compliance and compare our performance with other cancer programs approved through the American College of Surgeons Commission on Cancer (CoC) Comprehensive Community Cancer Programs (CCCP). Compliance is demonstrated by the estimated performance rate being at or above the CoC benchmark, or by falling within the 95 percent Confidence Interval (CI). The cancer center met or exceeded all CoC benchmarks for all measures for the current reporting period.

Radiation therapy is administered within 1 year (365 days) of diagnosis for women under the age of 70 receiving breast conservation surgery for breast cancer (Accountability).

Combination chemotherapy is recommended or administered within 4 months (120 days) of diagnosis for women under 70 with AJCC T1cN0, or Stage IB-III hormone receptor negative breast cancer.
Radiation therapy is recommended or administered following any mastectomy within 1 year (365 days) of diagnosis of breast cancer.

Tamoxifen or third generation aromatase inhibitor is recommended or administered within 1 year (365 days) of diagnosis for women with AJCC T1c or Stage IB-III hormone receptor positive breast cancer (Accountability).
Image or palpation-guided needle biopsy to the primary site is performed to establish diagnosis of breast cancer (Quality Improvement).

Adjuvant chemotherapy is recommended or administered within 4 months (120 days) of diagnosis for patients under the age of 80 with
At least 12 regional lymph nodes are removed and pathologically examined for resected colon cancer (Quality Improvement).

**Preoperative chemo and radiation are administered for clinical AJCC T3N0, T4N0 or Stage III; or postoperative chemo and radiation are administered within 180 days of diagnosis for clinical AJCC T1-2NO with pathologic T3N0, T4N0 or Stage III; or treatment is recommended for**
Surgery is not the first course of treatment for clinical N2, M0 NSCLC cases (Quality Improvement).

Systemic chemotherapy administered within 4 months to day preoperatively or day of surgery yo 6 months postoperatively, or is recommended for surgically resected cases with pathologic lymph node positive NSCLC (Quality Improvement).
At least 15 regional lymph nodes are removed and pathologically examined for resected gastric cancer (Quality Improvement).
